## **DETAILED ACTION**

An examination of this application reveals that applicant is unfamiliar with patent prosecution procedure. While an inventor may prosecute the application, lack of skill in this field usually acts as a liability in affording the maximum protection for the invention disclosed. Applicant is advised to secure the services of a registered patent attorney or agent to prosecute the application, since the value of a patent is largely dependent upon skilled preparation and prosecution. The Office cannot aid in selecting an attorney or agent.

A listing of registered patent attorneys and agents is available on the USPTO Internet web site http://www.uspto.gov in the Site Index under "Attorney and Agent Roster." Applicants may also obtain a list of registered patent attorneys and agents located in their area by writing to the Mail Stop OED, Director of the U. S. Patent and Trademark Office, PO Box 1450, Alexandria, VA 22313-1450.

## Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-10 are rejected as failing to define the invention in the manner required by 35 U.S.C. 112, second paragraph.

The claim(s) are narrative in form and replete with indefinite and functional or operational language. The structure which goes to make up the device must be clearly and positively specified. The structure must be organized and correlated in such a

Application/Control Number: 10/766,269 Page 3

Art Unit: 1724

manner as to present a complete operative device. The claim(s) must be in one sentence form only. Note the format of the claims in the patent(s) cited.

Examiner notes that claims 1 and 3 are multiple sentences. Examiner notes that each claim in the application should be constructed of a single sentence. Examiner suggests wording the independent claim to include a preamble which ends with a transitional word(e.g. comprising), and then further includes distinct structural limitations in the body of the claim, wherein each distinct structural limitation is followed by a semicolon, so that the claim is formed as a single sentence. Examiner notes that narrative type limitations such as claim 3 lines 4-5 are not proper for claims. Claims 2-10 depend on claim 1 and hence are also rejected.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Application/Control Number: 10/766,269

Art Unit: 1724

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chiao et al(2003/0206834) taken together with Murray(2002/0197187).

Chiao et al teaches a scenting device consisting of a base unit(see figure 36) and removable cartridges(5) for freshening air in an airflow system including a plastic base unit having slots configured to engage at least one scent cartridge per slot, and an attachment mechanism on the base unit(paragraph 0119), and scent cartridges to be inserted into the slots of the base unit. Chiao et al is silent as to multiple attachment means on the base unit for attachment to a variety of devices. Murray teaches an air treatment device to be placed in fluid communication with an air stream which includes a container with a treatment substance within the container, and an attachment device to adjustably and releasably connect the treatment device to an air handling apparatus, wherein the attachment device can include a combination of magnets, adhesives, velcro, clips, posts, and ties(see abstract). It would have been obvious to someone of ordinary skill in the art at the time of the invention to provide a multiple attachment means on the base unit for attachment to a variety of devices so that the portable scenting device of Chiao et al is attached to a plurality of different surfaces or airflow mechanisms.

Chiao et al further teaches attaching means selected from a group consisting of hook and loop fasteners, "S' hook fasteners, pins, barbs, clips, clamps, adhesives, and tapes. Chiao et al further teaches wherein the case stands alone as a carrying case for scent cartridges. Chiao et al further teaches wherein the base unit is made of glass, metal, plastic, or cardboard, and the cartridges are made of glass, plastic, or metal.

Application/Control Number: 10/766,269 Page 5

Art Unit: 1724

Chiao et al further teaches wherein the cartridges contain atomizable liquids of all types.

Chiao et al further teaches an open top for slow evaporation of the scent.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert A. Hopkins whose telephone number is 571-272-1159. The examiner can normally be reached on Monday-Friday, 7am-4pm, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Duane Smith can be reached on 571-272-1166. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
